

## **Corium Announces Issuance of Additional U.S. Patent Covering Corplex™ Donepezil Transdermal System for Alzheimer's Disease**

July 11, 2018

### **Second Orange Book Listable Patent Provides Expanded Coverage to 2037**

MENLO PARK, Calif., July 11, 2018 (GLOBE NEWSWIRE) -- Corium International, Inc. (NASDAQ:CORI), a commercial stage biopharmaceutical company focused on the development, manufacture and commercialization of specialty transdermal products, announced today that the United States Patent and Trademark Office has issued a new key patent related to the company's Corplex Donepezil Transdermal Delivery System (TDS), a once-weekly patch that delivers the most commonly prescribed medication for Alzheimer's patients. U.S. Patent No. 10,016,372 provides coverage of methods of administering donepezil through the skin to achieve safe, effective and sustained delivery of the drug for a 7-day wear period. As previously announced, the Corplex Donepezil TDS has achieved positive results in clinical bioequivalence testing, and Corium is preparing to file a New Drug Application in early 2019 for the product based on these results.

"Together with our previously issued composition of matter patent announced in June 2018, the method of delivery claims in the U.S. Patent No. 10,016,372 broaden our IP portfolio for the transdermal delivery of donepezil," said Parminder "Bobby" Singh, Ph.D., Chief Technology Officer and Vice President, R&D at Corium, and a co-inventor on the patent. "We continue to leverage our innovative Corplex platform technology to develop important therapies that provide meaningful benefits to patients and their families. "

The new patent is eligible for listing in the FDA Orange Book, and its life extends at least to July 2037. Corium has several additional pending patent applications relating to various aspects of Corplex Donepezil, as well as similar products.

#### **About Alzheimer's Disease and Donepezil**

Alzheimer's disease is a progressive brain disorder in which the brain cells degenerate and die, causing a steady decline in memory and mental function. According to the Alzheimer's Association, an estimated 5.7 million Americans are living with Alzheimer's disease in 2018; by 2050, this number is projected to rise to 13.8 million. Alzheimer's disease is the most common cause of dementia among older adults. Dementia ranges in severity from mild, when it is just beginning to affect a person's functioning, to moderate, and severe, when the person must depend on others for the basic activities of day-to-day life.

Donepezil (the active ingredient in Aricept®) is the most widely prescribed medication in a class of Alzheimer's drugs known as cholinesterase inhibitors, and is approved for the treatment of mild, moderate and severe disease. Donepezil is currently only available in tablet or orally disintegrating tablet form, each administered once daily, presenting compliance challenges for family members and caregivers who cannot rely on patients to consistently take their daily tablets, and is known to cause gastrointestinal side effects, including nausea, vomiting and loss of appetite.

#### **About Corplex**

Corium's Corplex system is a novel commercial-stage platform technology designed to broadly enable the transdermal delivery of small molecules, many of which have not previously been amenable to transdermal delivery. Corium's Corplex technology has been successfully commercialized in Procter & Gamble's Crest® Whitestrips products, and is being utilized in therapeutic products under development.

#### **About Corium**

Corium International, Inc. is a commercial-stage biopharmaceutical company focused on the development, manufacture and commercialization of specialty pharmaceutical products that leverage the company's broad experience with advanced transdermal and transmucosal delivery systems. Corium has multiple proprietary programs in preclinical and clinical development, focusing primarily on the treatment of neurological disorders, with lead programs in Alzheimer's disease. Corium has developed and is the sole commercial manufacturer of seven prescription drug and consumer products with partners Mayne Pharma and Procter & Gamble. The company has two proprietary transdermal platforms: Corplex™ for small molecules and MicroCor®, a biodegradable microstructure technology for small molecules and biologics, including vaccines, peptides and proteins. In addition to its proprietary Alzheimer's program, the company's late-stage pipeline includes a contraceptive patch co-developed with Agile Therapeutics and additional transdermal products that are being developed with other partners.
